1 Command Syntax

Open Command Prompt (Win + R, type cmd, press Enter) and navigate to the directory containing `aac.exe`.

```
aac.exe <mode> <k> <input_path> [output_path]
```

1.1 Parameters

Parameter	Values	Description
mode	exact approx	Algorithm selection
k	$k \in \mathbb{Z}^+$	Size of subgraph to find
input_path	file path	Input file containing both graphs
output_path	file path	Optional; defaults to stdout

2 Examples

```
aac.exe exact 5 graphs.txt results.txt
```

Runs the exact algorithm with $k = 5$, reading from `graphs.txt` and writing results to `results.txt`.

```
aac.exe approx 10 data.txt
```

Runs the approximation algorithm with $k = 10$, outputting results directly to the console.
